Summary

I'm a full-stack engineer with 5+ years of experience building software for everything from nimble startups to large banks and consultancies. Adept across the full development stack, with deep expertise in backend, frontend, DevOps, and systems architecture.

I'm big on clear communication, team collaboration, and mentoring, and I love applying systems thinking to help teams ship great software faster. Whether I'm hands-on coding or guiding a team through complex decisions, I aim to raise the bar and keep things moving forward.

Relevant Experience

Software Engineer, **Digizoo**

October 2023 — Present Sydney (Hybrid)

Projects

> **Regional Australia Bank** — *Core banking integration*

NestJS

Typescript

Monorepo

Azure

Architecture & Design

> **ING** — *Data pipelines for online banking*

Kafka

Spring

Java

Azure

Grafana

Prometheus

Software Engineer, **Greater Bank**

April 2022 — October 2023 Newcastle (Hybrid)

As part of a digital transformation project, I helped build and deliver a modern, cloud-first digital bank from scratch.

- Helped design and implement a multi-repo release and regression strategy spanning the entire digital stack.
- Designed and deployed shared CI/CD configuration across microservices to standardise and enforce release, testing, quality, and compliance processes.
- Implemented an automated dependency management solution for 30+ repositories to meet strict security requirements.
- Performed performance testing and fixed bottlenecks, leading to considerable increases in application stability and significant reduction in response times.

Kubernetes

Microservices

Spring

Kotlin

Angular

TypeScript

GCP

Relevant Experience Continued

Software Engineer, **BodyMindLife Online**

October 2021 — April 2022 Newcastle (Hybrid)

Working for a startup, building a creator first yoga streaming platform.

NextJS

React

Typescript

GraphQL

Cypress

Go

GCP

Software Engineer Intern, **Userlot**

February 2021 — October 2021 Newcastle (Hybrid)

As part of UON's Work Integrated Learning (WIL) project, I built an embeddable third-party widget to collect surveys from customers and capture data in a dashboard for a local tech startup.

React

GraphQL

Ruby on Rails

Sidekiq

Webpack

Junior Software Engineer, **Newton Green Technologies**

November 2020 — October 2021 Newcastle (Hybrid)

Projects

> **Whistle** — *Real-time aged care communication platform*

Laravel

PHP

Redis

> **FeralScan** — *Community pest tracker*

ServiceStack

C#

Junior Developer, **Global Acoustics**

February 2020 — November 2020 Newcastle

Solely responsible for delivery of a full-stack safety management tracker used by on-the-ground teams every day to log safety and compliance paperwork.

NextJs

GraphQL

Express

OAuth

Education

Bachelor of Computer Science / Mathematics, **University of Newcastle**

Distinction, Dr. Robert M. Sheahan Memorial Scholarship

Studied topics including artificial intelligence, systems thinking, data science, machine learning, databases, algorithms, system and network security, web development, predictive analytics, operating systems, and human-computer interaction, linear algebra, statistical inference.
